

## MONTANA GREENHOUSE GAS EMISSIONS AND SINKS INVENTORY: SUMMARY

The report *“Montana Greenhouse Gas Emissions Inventory: Estimate for 1990”* provides a detailed inventory of greenhouse gas emissions and sinks for Montana in 1990. Emissions were estimated using methods from EPA's 1995 guidance document ***State Workbook: Methodologies for Estimating Greenhouse Gas Emissions***. In 1990, Montana emitted 4.1 million metric tons of carbon equivalent (MMTCE). Montana estimated emissions of approximately 0.1 MMTCE and avoided emissions of 3.2 MMTCE from biomass fuels and from other sources not included in the workbook.<sup>1</sup> Emissions from these sources are not included in the reported total or the table below.

The principal greenhouse gases were carbon dioxide, comprising 10.2 million metric tons (2.8 MMTCE), and methane, with 0.2 million metric tons (0.9 MMTCE). Other emissions included 2,045 metric tons of nitrous oxide (0.2 MMTCE), and 112 metric tons of perfluorocarbons (0.2 MMTCE).

The major source of carbon dioxide emissions was fossil fuel combustion (99%), with minor emissions from cement and lime manufacture (1%). Exported electricity, transportation petroleum, and utility coal accounted for over 70% of those emissions. Carbon dioxide sinks (i.e., an increase in forest carbon storage) offset about 63% of the total carbon dioxide emissions. Contributors to methane emissions were domesticated animals (68%), waste (22%), and natural gas and oil production and coal mining (10%). The source of nitrous oxide emissions was fertilizer use.

<sup>1</sup> These emissions include carbon dioxide from paper pulp lime kilns, aluminum production, and avoided carbon dioxide emissions due to fire suppression efforts.

### Montana Greenhouse Gas Emissions for 1990

SECTOR	CO <sub>2</sub> (MMTCE)	Methane (MMTCE)	Nitrous Oxide (MMTCE)	PFCs (MMTCE)	Total GHG Emissions (MMTCE)
Energy - Residential	0.3	*	*	*	0.3
Energy - Commercial	0.2	*	*	*	0.2
Energy - Industrial	1.3	*	*	*	1.3
Energy - Transport	1.6	*	*	*	1.6
Energy - Utility	1.7	*	*	*	1.7
Energy – Exported Electricity	2.2	*	*	*	2.2
<b>Total Energy</b>	<b>7.4</b>	<b>0.1</b>	*	*	<b>7.5</b>
<b>Waste</b>	*	<b>0.2</b>	*	*	<b>0.2</b>
<b>Agriculture</b>	*	<b>0.6</b>	<b>0.2</b>	*	<b>0.8</b>
<b>Industry</b>	<b>0.1</b>	*	*	<b>0.2</b>	<b>0.3</b>
<b>Land Use</b>	<b>-4.7</b>	*	*	*	<b>-4.7</b>
<b>Total</b>	<b>2.8</b>	<b>0.9</b>	<b>0.2</b>	<b>0.2</b>	<b>4.1</b>

All emissions are reported in million metric tons of carbon equivalent (MMTCE).

An asterisk ( \* ) indicates that emissions of the gas from this sector were zero, insignificant, or not reported.

Emissions due to coal mining and extraction of natural gas and oil are included in the total energy figures, and emissions from biofuel combustion are excluded.

Montana emissions in 1990 were 5.1 MTCE per capita, compared to 1990 U.S. emissions of 6.4 MTCE per capita.
